Do you provide UI/UX design?

Yes. Coding Media provides UI/UX design solutions for websites, web applications, landing pages, and digital interfaces.

Can you integrate APIs into a website?

Yes. Websites and web applications can integrate with external APIs and business systems when required and technically supported.

3. CATALOG & DESIGN FAQ

Do you design product catalogs?

Yes. Coding Media provides product catalog design services for businesses that need professional product presentation.

What can a product catalog contain?

A catalog may contain:

- Product images
 - Product names
 - Product descriptions
 - Product specifications
 - Product categories
 - Product highlights
 - Pricing information when provided
 - Brand elements
 - Company information
 - Contact information
-

Do you design brochures?

Yes. Coding Media provides brochure design services for company information, products, services, marketing communication, and promotional purposes.

Do you design company profiles?

Yes. Coding Media provides company profile design services to present company information, services, products, capabilities, business strengths, and contact information professionally.

Do you design logos?

Yes. Logo design is included among Coding Media's graphic design and branding capabilities.

Do you provide complete branding?

Yes. Branding solutions may include logo design, brand identity, colors, typography, visual direction, brand guidelines, and other visual assets depending on the project scope.

Do you provide packaging design?

Yes. Coding Media provides packaging design solutions based on the product, brand identity, target audience, packaging format, and project requirements.

Do you design presentations?

Yes. Coding Media provides presentation design services for business, company, product, sales, pitch, marketing, and internal communication purposes.

4. DIGITAL MARKETING FAQ

Do you provide digital marketing?

Yes. Coding Media provides digital marketing services focused on online visibility, audience engagement, brand communication, and marketing objectives.

Do you provide SEO?

Yes. Coding Media provides SEO services that may include keyword strategy, website optimization, technical optimization, content structure, search visibility improvement, and performance improvements.

Do you provide social media marketing?

Yes. Coding Media provides social media marketing services including social media strategy, creative content, social media graphics, audience targeting, campaign planning, engagement-focused content, and brand communication.

5. AI CHATBOT FAQ

Do you develop AI chatbots?

Yes. Coding Media provides AI chatbot development and AI automation solutions for business use cases.

Do you develop WhatsApp chatbots?

Yes. Coding Media can develop AI-powered WhatsApp chatbot solutions for customer communication, FAQs, lead generation, customer support, and selected business workflows.

What can a WhatsApp chatbot do?

Depending on the project, a WhatsApp chatbot can:

- Answer FAQs
 - Explain company services
 - Provide product information
 - Capture customer inquiries
 - Capture leads
 - Qualify leads
 - Support customers
 - Retrieve company knowledge
 - Connect with authorized APIs
 - Transfer conversations to humans
 - Automate selected workflows
-

Can the chatbot answer questions about my company?

Yes. A knowledge-based AI chatbot can use company documents and structured knowledge to answer company-specific questions.

What is RAG?

RAG means Retrieval-Augmented Generation.

RAG allows an AI system to retrieve relevant information from a knowledge base before generating a response.

This allows the chatbot to use company-specific information when answering questions.

Can the chatbot read PDF files?

A RAG system can process supported documents such as PDFs and extract their content into a searchable knowledge base.

The exact supported file formats depend on the implementation of the knowledge-processing system.

Can the chatbot use company documents?

Yes. Company documents can be processed and indexed into a knowledge base so that the AI can retrieve relevant information during conversations.

Does the knowledge base have to be in Hindi?

No.

The knowledge base can primarily be maintained in English.

A multilingual AI model can retrieve English information and generate the response in English, Hinglish, or Hindi depending on the user's language.

Can the chatbot reply in Hinglish?

Yes.

If the user writes Hindi using Latin characters, the chatbot can respond naturally in Hinglish using Latin characters.

Example:

User:

bhai aap ecommerce website banate ho?

Response:

Haan, Coding Media e-commerce website development services provide karta hai. Project requirements ke according product catalog, cart, checkout aur other required features develop kiye ja sakte hain.

Can the chatbot reply in Hindi?

Yes.

If the user writes in Devanagari, the chatbot can respond in Hindi using Devanagari.

Example:

User:

क्या आप ई-कॉमर्स वेबसाइट बनाते हैं?

Response:

हाँ, Coding Media ई-कॉमर्स वेबसाइट डेवलपमेंट की सेवाएँ प्रदान करता है। प्रोजेक्ट की आवश्यकता के अनुसार product catalog, cart, checkout और अन्य आवश्यक features विकसित किए जा सकते हैं।

Can the chatbot reply in English?

Yes.

If the user communicates in English, the chatbot can respond in English.

Can the chatbot understand mixed Hindi and English?

Yes.

The chatbot can handle mixed Hindi-English conversations and naturally match the user's communication style.

6. AI AUTOMATION FAQ

What is AI automation?

AI automation connects AI systems with business processes, APIs, databases, knowledge bases, and authorized tools to automate selected tasks.

What business processes can be automated?

Depending on the project, automation may include:

- Lead capture
 - Lead qualification
 - Customer support
 - FAQ answering
 - Customer inquiry processing
 - Business information retrieval
 - CRM integration
 - Database integration
 - API integration
 - Workflow automation
 - Human handoff
-

Can AI connect with APIs?

Yes. AI solutions can connect with authorized APIs when the required API access and integration are available.

Can AI connect with databases?

Yes. AI applications can interact with databases through appropriate backend services and authorized tools.

The AI should only access information that it is authorized to access.

What is MCP?

MCP can be used to provide controlled access between an AI agent and approved tools or external systems.

MCP-based tools may allow an AI system to perform authorized operations such as retrieving information, checking records, or triggering selected workflows.

7. AI SAFETY & ACCURACY FAQ

What happens if the chatbot does not know the answer?

The chatbot should not invent information.

If the answer cannot be found in the available knowledge base or authorized tools, the chatbot should communicate that the information is currently unavailable and, where appropriate, ask for clarification or offer human assistance.

Can the chatbot invent prices?

No.

The chatbot should only provide pricing when official pricing information is available in the knowledge base or through an authorized business system.

Can the chatbot promise a delivery date?

No.

The chatbot should not promise a project or service timeline unless an official and applicable timeline has been provided.

Can the chatbot make commitments on behalf of the company?

Only when the commitment is supported by official company information or an authorized business workflow.

The chatbot should not create unsupported guarantees, discounts, prices, timelines, policies, or commitments.

Can the chatbot claim that it completed an action?

No.

The chatbot should not claim that an action was completed unless the relevant system or authorized tool actually performed and confirmed the action.

8. POST-PROJECT SUPPORT FAQ

Do you provide support after project completion?

Yes. Coding Media provides post-project support for applicable projects and services according to the agreed project scope.

What can post-project support include?

Depending on the agreed scope, support may include:

- Issue resolution
 - Technical guidance
 - Updates
 - Maintenance
 - Improvements
 - Assistance with the delivered solution
-

Is support automatically included in every project?

Support availability and scope depend on the project and agreed terms.

The chatbot should not claim that unlimited or lifetime support is included unless this has been officially confirmed for the specific project.

9. PROJECT PROCESS FAQ

How does a project start?

A project generally starts by understanding the client's business, objectives, requirements, target audience, required functionality, and project scope.

What is the typical development process?

A typical process is:

Discovery → Requirements → Planning → Design → Development → Integration → Testing → Review → Deployment → Support

The exact process depends on the project.

Can project requirements be customized?

Yes. Project requirements can be customized according to the business, target audience, functionality, technical requirements, integrations, and project scope.

10. CONTACT FAQ

How can I contact Coding Media?

You can contact Coding Media through:

Phone / WhatsApp: +91 83064 71487

Email: codingmediain@gmail.com

Website: <https://codingmedia.in/>

11. LANGUAGE RESPONSE POLICY

The chatbot should normally respond in the same language and script used by the user's latest message.

English

User writes in English → Respond in English.

Hinglish / Latin Hindi

User writes Hindi using Latin characters → Respond in natural Hinglish using Latin characters.

Hindi / Devanagari

User writes Hindi using Devanagari → Respond in Hindi using Devanagari.

Mixed Language

User mixes Hindi and English → Naturally match the user's communication style.

Company names, product names, URLs, SKUs, API names, technical identifiers, and exact field names should normally remain unchanged.
